Outline

Pop Songs and Political Science

Pop Songs and Political Science

Sheena Easton and Game Theory

Sheena Easton describes the following scenario for her baby:

1. Takes the morning train
2. Works from nine 'til five
3. Takes another train home again
4. Finds Sheena Easton waiting for him

Plot

Rick Astley's Re-election Platform

Rick Astley's campaign promises:

- Never gonna give you up.
- Never gonna let you down.
- Never gonna run around and desert you.
- Never gonna make you cry.
- Never gonna say goodbye.
- Never gonna tell a lie and hurt you.

Are these promises (if credible) sufficient to secure re-election?

Rick Astley and Median Voter Theorem

Whereas these pledges conform to the preferences of the **median voter**, we expect Congressman Astley to secure re-election.

Caribbean Queen and Operation Urgent Fury

Billy Ocean released “Caribbean Queen” in 1984.

- Emphasized sharing the same dream
- Hearts beating as one

“Caribbean Queen” is about the poor execution of Operation Urgent Fury.

- Echoed JCS chairman David Jones’ frustrations with military establishment.

Billy Ocean is advocating for what became the Goldwater-Nichols Act.

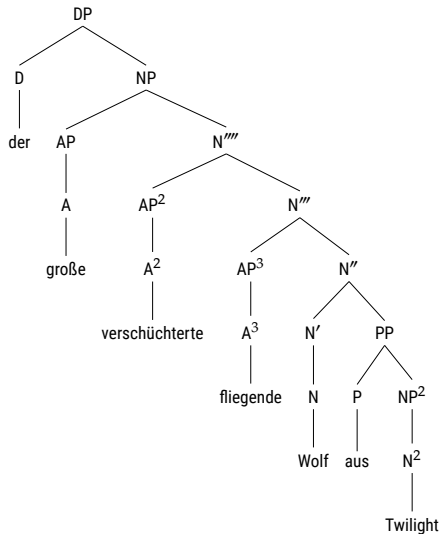

- Wanted to take advantage of **economies of scale**, resolve **coordination problems** in U.S. military.

The Good Day Hypothesis

We know the following about Ice Cube's day.

1. The Lakers beat the Supersonics.
2. No helicopter looked for a murder.
3. Consumed **Fatburger** at 2 a.m.
4. Goodyear blimp: "Ice Cube's a pimp." Heim & Kratzer (1998)
5. (Posner 1980, Hintikka 1969, Gries 2013, Grice 1989, Groenendijk & Stokhof 1984)

The Good Day Hypothesis

The Good Day Hypothesis

Colorless green ideas sleep furiously

(Noam Chomsky)

Functional Application (FA)

H&K:49

Wenn α ein verzweigender Knoten ist, $\{\beta, \gamma\}$ die Menge von α 's Töchtern ist und $\llbracket \beta \rrbracket$ eine Funktion ist, dessen Domäne $\llbracket \gamma \rrbracket$ enthält, dann $\llbracket \alpha \rrbracket = \llbracket \beta \rrbracket(\llbracket \gamma \rrbracket)$.

Semantics

(1) Lexikoneinträge

$\llbracket \text{not} \rrbracket = \lambda p \in D_t . p = 0$

$\llbracket \text{Carla} \rrbracket = \text{Carla}$

$\llbracket \text{invite} \rrbracket = \lambda x \in D_e . [\lambda y \in D_e . y \text{ lädt } x \text{ ein}]$

$\llbracket \text{a} \rrbracket = \lambda f \in D_{\langle e, t \rangle} . [\lambda g \in D_{\langle e, t \rangle} . \text{es gibt ein } x, \text{ sodass } f(x) = 1 \text{ und } g(x) = 1]$

$\llbracket \text{politician} \rrbracket = \lambda x \in D_e . x \text{ ist ein Politiker}$

The Good Day Hypothesis

This leads to two different hypotheses:

- H_0 : Ice Cube's day is statistically indistinguishable from a typical day.
- H_1 : Ice Cube is having a good (i.e. greater than average) day.

These hypotheses are tested using archival data of Ice Cube's life.

1. Color: $F(6, 53905) = 103.61, MSE = 15,216,972.28, p < .001, \hat{\eta}_G^2 = .011$
2. Cut: $F(4, 53905) = 144.40, MSE = 15,216,972.28, p < .001, \hat{\eta}_G^2 = .011$
3. Color:Cut: $F(24, 53905) = 4.53, MSE = 15,216,972.28, p < .001, \hat{\eta}_G^2 = .002$

(#tab:aovtable)

**

Effect	F	df_1	df_2	MSE	p	$\hat{\eta}_G^2$
Color	103.61	6	53905	15,216,972.28	< .001	.011
Cut	144.40	4	53905	15,216,972.28	< .001	.011
Color \times Cut	4.53	24	53905	15,216,972.28	< .001	.002
