# Sheena Easton and Game Theory

Sheena Easton describes the following scenario for her baby:

1. Takes the morning train
2. Works from nine 'til five
3. Takes another train home again
4. Finds Sheena Easton waiting for him

# Plot

# Rick Astley's Re-election Platform

Rick Astley's campaign promises:

- Never gonna give you up.
- Never gonna let you down.
- Never gonna run around and desert you.
- Never gonna make you cry.
- Never gonna say goodbye.
- Never gonna tell a lie and hurt you.

Are these promises (if credible) sufficient to secure re-election?

# Rick Astley and Median Voter Theorem

Whereas these pledges conform to the preferences of the **median voter**, we expect Congressman Astley to secure re-election.

# Caribbean Queen and Operation Urgent Fury

Billy Ocean released “Caribbean Queen” in 1984.

- Emphasized sharing the same dream
- Hearts beating as one

“Caribbean Queen” is about the poor execution of Operation Urgent Fury.

- Echoed JCS chairman David Jones’ frustrations with military establishment.

Billy Ocean is advocating for what became the Goldwater-Nichols Act.

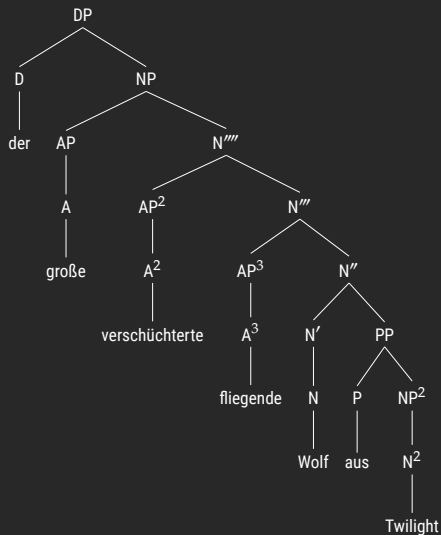

- Wanted to take advantage of **economies of scale**, resolve **coordination problems** in U.S. military.

# The Good Day Hypothesis

We know the following about Ice Cube's day.

1. The Lakers beat the Supersonics.
2. No helicopter looked for a murder.
3. Consumed **Fatburger** at 2 a.m.
4. Goodyear blimp: "Ice Cube's a pimp." Heim & Kratzer (1998)
5. (Posner 1980, Hintikka 1969, Gries 2013, Grice 1989, Groenendijk & Stokhof 1984)

# The Good Day Hypothesis

# The Good Day Hypothesis

Colorless green ideas sleep furiously

(Noam Chomsky)

## Functional Application (FA)

H&K:49

Wenn  $\alpha$  ein verzweigender Knoten ist,  $\{\beta, \gamma\}$  die Menge von  $\alpha$ 's Töchtern ist und  $\llbracket \beta \rrbracket$  eine Funktion ist, dessen Domäne  $\llbracket \gamma \rrbracket$  enthält, dann  $\llbracket \alpha \rrbracket = \llbracket \beta \rrbracket(\llbracket \gamma \rrbracket)$ .

# Semantics

## (1) Lexikoneinträge

$$\llbracket \text{not} \rrbracket = \lambda p \in D_t . p = 0$$

$$\llbracket \text{Carla} \rrbracket = \text{Carla}$$

$$\llbracket \text{invite} \rrbracket = \lambda x \in D_e . [\lambda y \in D_e . y \text{ lädt } x \text{ ein}]$$

$$\llbracket \text{a} \rrbracket = \lambda f \in D_{\langle e, t \rangle} . [\lambda g \in D_{\langle e, t \rangle} . \text{es gibt ein } x, \text{ sodass } f(x) = 1 \text{ und } g(x) = 1]$$

$$\llbracket \text{politician} \rrbracket = \lambda x \in D_e . x \text{ ist ein Politiker}$$

# The Good Day Hypothesis

This leads to two different hypotheses:

- $H_0$ : Ice Cube's day is statistically indistinguishable from a typical day.
- $H_1$ : Ice Cube is having a good (i.e. greater than average) day.

These hypotheses are tested using archival data of Ice Cube's life.
